

Below is the template you will have to follow while preparing your project template. Each section (top-level bullet in the below list) should start on a new page.

- Cover Page consisting of your Group Name, Group Members, Project's Name
- Table of Contents
- Introduction
 - 1 page summary to explain what your project aims to achieve.
 - This should not be more than 1 page.
- High Level Design
 - 1-2 pages summary of your solution's architecture.
 - Ensure that there is a diagram showing the main components, the communication channels between these blocks, etc.
 - Explain briefly system-wide decision points such as how to ensure system availability, etc.
- Detailed Design – Cloud Services
 - This section will have subsections.
 - Each Cloud service you use will have its own subsections, in which you explain
 - Why is this service used?
 - How did you configure the service?
 - What were the design options and why did you pick your selection?For example,
 - if you setup a Database, explain why you used AWS Database offers OR why you created your own Database.
 - Did you use VMs? Containers? Serverless Functions (i.e., Lambda)? Why?
 - Network topology? Private/Public subnets? NAT Gateway? DNS?
 - ...
- Detailed Design – Non-Cloud Part
 - This section will explain the rest of your solution. For example,
 - What did you build on the app level, on top of Cloud Services?
 - Which tech stack did you use? Why?
 - How does the solution work?
 - As our main goal is Cloud, it's OK not to provide a very detailed view. But the reviewer should be able to understand what you are doing on Cloud too.
- Contributions
 - 1 page to explain each member's contributions to the project.

- This can include your roles in different stages such as formalization of the idea, methodology design, data analysis, coding, validation, writing the project report.
